

# BALLY ENTERPRISE PROGRESSIVE SYSTEM™

## ONE ROBUST SYSTEM TO MANAGE ALL PROGRESSIVE OPERATIONS

The **Bally Enterprise Progressive System (BEPS)** is a powerful progressive management solution that allows you to easily configure, manage, and audit your progressive operations from one convenient central location, regardless of the slot management system (SMS) in use.

BEPS is the ideal solution for replacing or consolidating existing progressive equipment and supports both symbol-driven and mystery progressive links for complete control and total flexibility.

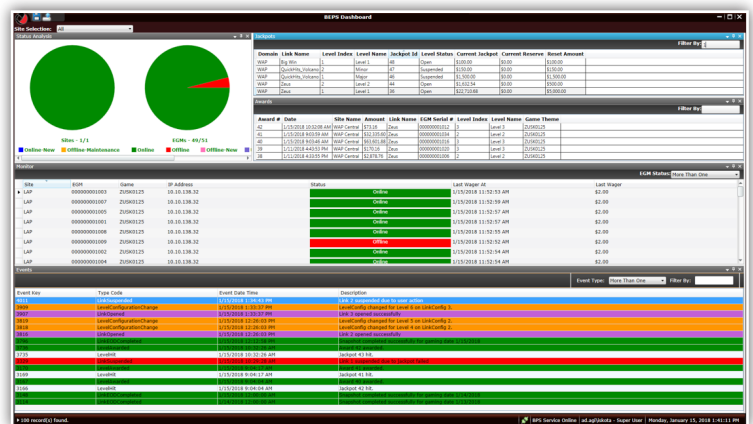

BEPS is designed to work with your existing Bally Systems' GMU (SDS™ MC350, ACSC™ NT) interface, as a **single-wire solution**.

BEPS also supports **second-wire solutions**:

- Game Monitoring Module (GMM) – an interface between SAS-based EGMs and BEPS. The GMM is ideal for customers who do not use a Bally SMS.
- WMS Board – an interface between WMS EGMs and BEPS. Ideal for WMS EGMs that support only WMS-based progressives.
- ASP Board – an interface between ASP EGMs and BEPS. Ideal for ASP EGMs that support only ASP-based progressives.
- MML Ethernet Connection – a direct TCP/IP-based interface between SG Argos EGMs and BEPS. Ideal for SG EGMs using the proprietary MML progressive protocol.

### BEPS OFFERS:

- Open architecture compatible with all major SMS
- Decreased labor expenses
- Mobile application for monitoring, award notifications and progressive meter verification
- Exceptional security
- Easy to configure progressive links
- Effortless accounting
- Flexible installation options
- Reliable performance
- Leveraging of existing casino infrastructure

*BEPS Dashboard showing the overall status of progressive controllers and EGMs connected to the system, as well as recent events.*

### **CHOOSE YOUR PROGRESSIVES AND OFFER MORE WAYS TO WIN**

BEPS supports 2,000 progressive and mystery levels on up to 10,000 progressive games per casino, and up to 20,000 progressive games per enterprise installation. Combine your choice of standalone, local-area and wide-area configurations with symbol-driven and system-based mystery progressives. BEPS also supports popular multi-game, multi-denom and multi-progressive cabinets.

### **ACCOMPLISH MORE**

With BEPS, you accomplish more with less. Offering symbol-driven progressives and system-based mystery progressives, BEPS gives you total command over your award structure. It even allows you to reward your players with traditional progressive jackpots or custom prizes like a new car. You have full control to set up, monitor, and reconcile all your creative awards with BEPS.

### **EASE OF USE**

BEPS helps you customize your casino operations for maximum excitement and increased efficiency. BEPS has a user-friendly interface and reporting capabilities that provides one view of all progressives through a central database that tracks all game play, contribution, and jackpot events. BEPS provides historic reporting and security monitoring for jackpot verification.

### **EFFORTLESS ACCOUNTING**

When it comes to reporting, BEPS was designed to be easy, efficient and complete. BEPS collects the progressive data from each site, and aggregates and stores it in the central reporting database. This data is used for daily summary reports, including a comparison of the calculated ending jackpot value to the actual jackpot value recorded. Each report depicts the formula used to calculate the value, as well as a field that gives the variance between the actual and calculated value. Additionally, a detailed report that breaks down the individual components of the calculation is available.

### **KEY BEPS FUNCTIONS:**

- Multi-game multi-denom support
- Progressive configuration – standalone/internal (SAP), linked (LAP) and multi casino links (WAP)
- Signage configuration
- Progressive accrual and updates
- Jackpot hit processing
- Progressive reporting (eliminate daily manual progressive meter reading)
- Progressive jackpot adjustment
- Progressive jackpot retirement
- User roles and account management
- Performance monitoring
- Event monitoring
- Jackpot monitoring & dashboard
- BEPS software integrity monitoring
- Site/floor controller standalone operation
- Event and jackpot notifications (email)
- Secondary approval for key configuration changes
- Quick SAS jackpot reset
