BALLY CASINO MANAGEMENT SYSTEM[®] SOLUTIONS ENABLED ON IBM PUREFLEX

Bally Technologies enabled its ACSC[™] CMS solutions on IBM PureFlex, a member of the PureSystems family, to deliver to clients a solution that leverages integrated expertise. CMS provides clients with a full range of customizable software products to manage virtually every function of their casino. To help clients meet today's complex and ever-changing business demands IBM released IBM PureSystems, the first family of systems offering built-in expertise, integration by design, and simplified experience.

IBM PureFlex System is a comprehensive infrastructure system that combines servers, enterprise storage, networking, virtualization, and management into a single structure. Its built-in expertise enables Bally to manage and flexibly deploy integrated patterns of virtual and hardware resources through unified management. These systems deliver the simplicity of an integrated solution while still able to tune middleware and application environments. Using built-in virtualization across servers, storage, and networking, the infrastructure system enables automated scaling of resources and true workload mobility.

Bally ACSC CMS enabled on IBM PureFlex System has integrated patterns of expertise that have undergone significant testing and experimentation to mitigate IT complexity without compromising the flexibility to tune systems to meet business demands. By providing both flexibility and simplicity, IBM PureFlex System can provide extraordinary levels of IT control, efficiency, and operating agility to the Bally CMS solution. Bally clients can count on built-in redundancy, resilient operations, and enhanced security.

With Bally ACSC CMS enabled on IBM PureSystems, clients can stay focused on driving innovation for their business, instead of devising, testing, and tuning custom integration solutions.

Bally ACSC CMS virtual appliance pattern for IBM PureFlex System will soon be available for download. Please call Bally Systems Sales at 702-584-6715 or email TReilly@BallyTech.com for more details.
